

**WEB-BASED USER INTERFACE**  
**FOR PERFORMING PROVISIONING**

**ABSTRACT**

Web-based user interface for performing network provisioning. The Web-based user interface includes pages for display on a display device. Each page may include a first area containing a graphical workflow indicator that provides an ordered list of user-selectable tasks associated with performing provisioning in a network. Each page may also include a second area containing display information and/or parameter fields associated with a particular one of the user-selectable tasks. Accordingly, when a particular one of the user-selectable tasks is selected from the first area, the display information and/or parameter fields necessary to complete operations associated with the particular one of the user-selectable tasks are presented in the second area.
